

Rail Cap™

A higher level of maritime security.

The Rail Cap is an armor and glass system designed to add ballistic, blast and fragment protection to shipboard and architectural railings. Once installed, the unit creates a protected position with a full field of vision and the ability to return fire. The Rail Cap is ideal for use on commercial and military ships traveling in high-risk areas, as well as guard towers, prisons and government buildings.

Rail Cap units are also effective for maritime anti-piracy use. Their universal fittings enable the units to be easily and securely attached to a variety of railing configurations. By adding transparent armor to a ship's railing, personnel are able to spot and respond to approaching threats while remaining protected from gunfire, blasts and other attacks.

Built to protect, built to last

Constructed of transparent armor and durable powder-coated steel, the Rail Cap is weather-resistant and capable of withstanding the extremes in maritime environments. Each standard 2-foot unit provides 10 square feet of protection, up to NIJ Level IV 30-06 AP resistance. Other features include:

- Can be easily transported throughout the ship by two people
- Modular design makes replacing damaged glass components quick and easy – no tools required
- NIJ Level III version defeats rifle rounds up to 7.62 NATO
- NIJ Level IV version defeats armor-piercing rifle rounds up to 30-06 AP
- Custom sizes and finishes are also available

Rail Caps are a stand-alone, modular device that can easily be integrated with other ballistic equipment produced by Defenshield, including the RPG Wall, Fox Hole, or Mobile Defensive Fighting Positions. Defenshield, Inc. is a global leader in defensive equipment design and engineering, whose products are currently saving the lives of a diverse range of customers around the world.

Specifications

Product Name:	Rail Cap
Description:	Transparent armor cap for railing systems
Protection:	NIJ Level III or IV
Size:	Per 2' unit – 24" w x 60" h
Weight:	Per 2' unit ~ 215 lbs (NIJ Level III)
